

NOTE: The President spoke at 7:30 p.m. in the gymnasium at Norristown Area High School. In his remarks, he referred to Rev. Charles D. Williams, pastor, Mt. Zion AME Church, who gave the invocation; Dr. Michael V. Woodall, superintendent, Norristown Area School District; Barry E. Spencer, principal, Norristown Area High School; Melissa Ghoston, president, Norristown Area School Student Council; Tommy Lasorda, former Dodgers manager and member of the Baseball Hall of Fame; Mike Piazza, catcher, New York Mets; and Yogi Berra, former Yankee manager and player and member of the Baseball Hall of Fame. The transcript made available by the Office of the Press Secretary also included the remarks of Vice President Al Gore.

Remarks to an Overflow Crowd in Norristown, Pennsylvania

January 20, 1999

Thank you very much. You know, I felt, even when I thought there were just a couple of hundred people here, I felt so badly for you having to wait and wait and wait.

But let me tell you, you should know at least it is a lot cooler in here than it is in there. We have had a wonderful, wonderful time here. We are very grateful to all of you for coming out, for supporting your schools, supporting your communities, supporting your country, and we thank you so much. And of course, just personally, it's meant a great deal to Al and Tipper and to Hillary and me to see you here and see you so enthusiastic about the future.

I want you to remember how you feel tonight, and I want you to keep it with you all year long. We've got a lot to do, and it's going to be good for America.

God bless you.

NOTE: The President spoke at 8:58 p.m. in the auditorium at the Norristown Area High School. The transcript made available by the Office of the Press Secretary also included the remarks of Vice President Al Gore and Representative Joseph M. Hoeffel.

Remarks on the Initiative To Provide a Qualified Teacher in Every Classroom

January 21, 1999

Well, Sergeant, I don't think I need to say anything else. [*Laughter*]

Let me thank all of you for coming today and welcome you here. This is the 21st year of a partnership in education that involves Hillary and me and Secretary Riley. We all started working together in 1979, and we've been at it a good while now. Few things that I have ever been a part of have given—sort of thrilled me more than just listening to Arthur Moore talk. And I'm sure all of you felt the same way.

I thank the Members of Congress who are here and all the other distinguished guests. I would like to recognize just three: first, we have here the President of the Navaho Nation, Kelsey Begaye; and Samuel Penney, the chairman of the Nez Perce Tribal Executive Committee; and Arthur Moore's daughter, Andrea, is here, and she must have been awful proud of her father today, and I know he's proud of her. So we welcome all of them.

After the Soviet Union launched *Sputnik* in October of 1957, President Eisenhower asked the Congress to rise to the challenge of the times and proposed a new Federal program to help public school teachers improve their math and science instruction. He understood that teaching is an important part of our national security. And I think, therefore, that President Eisenhower—and General Eisenhower—would have been very pleased to see Arthur Moore as a soldier-turned-teacher.

Two days ago, in the State of the Union Address, I asked Congress to rise to the demands of this time, to pass an "Education Accountability Act" that would offer more investment, demand more accountability, and not as some have implied, have the Federal Government try to run more of our day-to-day activities in our public schools but simply have the Federal Government respond to what the teachers of this country and the

principals and the educators have been telling us, and invest in what works. We now have an opportunity to do that. With the strength of our economy and with the size of our surplus, we have an opportunity. We also have an obligation.

Research confirms what most of us know from our own experience: What most determines whether students learn is not family background or even dollars spent per pupil but the talent, the ability, and the dedication of their teachers.

Every adult in this room, I know, can recall the names of teachers who deeply affected our own lives and helped us to get where we are today. I was thinking this morning about my high school band teacher. And you say, you wouldn't think that the band teacher would have a lot to do with a person becoming President, but he instilled not only in me a love of music but also a reminder that I could never manifest that love unless I worked like crazy, that I had to learn to work in a team. I couldn't play too loud just because I liked the part. *[Laughter]* And because we ran the statewide music festival every year, he taught me how to organize and how to manage people and time, all kinds of things that teachers teach children that stay with them for a lifetime.

There are an awful lot of teachers like that in America. But we have to face the fact that because our classrooms are bursting with 53 million children because, frankly, we still don't pay our teachers as much as we should in most places, a quarter—listen to this—a quarter of all secondary school teachers don't have college majors or even minors in the subjects they are teaching. And the deficit is greatest where the need is greatest.

Schools with the highest minority enrollment, for example, have less than a 50–50 chance—now, think about this—less than a 50–50 chance of having a math or science teacher with a license or degree in the field.

I don't know if you remember what I said in the State of the Union the other night about what the international test scores show, but basically our fourth graders rank near the top of all industrialized countries in performance in math and science. Our eighth graders drop to the middle; our 12th graders are near the bottom. No one can doubt, surely, that

one reason is the absence of a pool of teachers who have been trained in the subjects they are teaching.

Now, we have a real opportunity to get more good teachers in general, more good education practice, and more properly, specifically trained teachers, in particular this year, because every 5 years, the Federal Government revisits the terms on which it invests \$15 billion in our Nation's schools; 1999 is the 5th year. We have to do it again. It gives us a golden opportunity and a solemn responsibility to change the way we invest the money to invest in what works and to stop investing in what doesn't.

So I intend to send Congress a plan that will, among other things, require States receiving Federal funds to end social promotion but will also provide them the funds for summer school, after-school, and other support for children who need it—if you look at what I just said about the progression of the test, it is not the students who are failing; it is the system that is failing the students, and we need to respond accordingly—second, to adopt and enforce strict discipline codes, something teachers in the teachers' organizations have asked us to support more vigorously; third, to give parents report cards on their children's school; fourth, to turn around the worst-performing schools or close them, and we will provide funds to help States do that; and finally, to be accountable for the quality of their teachers, with new teachers passing performance exams, all teachers knowing the subjects they're teaching; and we will provide support for that.

We also should build or modernize 5,000 schools, continue our work to hook every classroom and library up to the Internet. But I want to focus for a moment on the teaching. How can we get more Arthur Moores out there? And I'd like to mention just four things that will be in the balanced budget I will submit to Congress early next month.

First, I will call on Congress to invest \$1.4 billion to hire new, better-trained teachers to reduce class size in the early grades. This is the next big installment on our goal to hire 100,000 new teachers, and it's a 17-percent increase over the very large downpayment we made last year.

Second, I will ask Congress to invest \$35 million to provide 7,000 college scholarships for our brightest young people who commit to teaching where they can do the most good, in the poorest inner-city and rural schools. This is over 5 times the investment Congress made last year, and I think it is a wonderful idea. We came up with this idea because it's modeled, basically, on the National Medical Service Corps. Some of you may have once lived in rural America. When I was Governor, sometimes the only way we could get doctors to go into rural areas is that they had taken funds to go to medical school, and they realized in return for which they would need to go out into rural areas and practice medicine, and they got to pay off a certain amount of their loan every year.

It's also the way the national defense loans worked. I actually had one of them in law school. If you taught school for a certain number of years, a certain percentage of your loan would be forgiven. And I can't think of a better way to give some of the most gifted young people in this country a chance to do something they might like to do anyway, in ways that would, in effect, work out to supplement the salary they would otherwise be earning.

Third, I will ask Congress to invest \$10 million to train 1,000 Native Americans to teach on Indian reservations and in other public schools with large Native American populations.

Fourth, I will call on Congress to invest \$18 million to recruit and train retired members of the military to become teachers. Since 1994—you heard Arthur say this is his 5th year of teaching—our Troops for Teachers Program has helped 3,000 active-duty soldiers who were planning to leave the military and find rewarding second careers in teaching. That experience has shown that people like Mr. Moore make great teachers and great role models.

I again want to thank all the Members of Congress—Secretary Riley mentioned them; one of them, Chet Edwards, is here—for the work that they have done in this regard. Congresswoman Mink and I were recently together in Korea visiting our troops. And I met a senior master sergeant who was about to retire after 29 years in the military. He

was 49 years old; he could still run a 6-minute mile. [Laughter] And he was going home to Kentucky to teach children. He said, "I think I can do those kids some good."

There are a lot of people like this. You go out into—if you visit with the people in the military, that make the military their career, you just can't fail to be impressed with the accumulated weight of experience. They've dealt with every kind of human problem you can imagine. They understand, increasingly—and I must say, in the last several years, more and more—the importance of balancing discipline and creativity, letting people think for themselves but also reminding that they have to play on the team and with certain rules. And they understand how to manage people and resources—and limited resources—to do a job of limitless importance. They tend to have math and science backgrounds. And they have shown a remarkable willingness to teach in inner-city and rural schools that have difficulty recruiting teachers.

So these 25 million veterans—and there will be more as time goes on, obviously, more and more every year—are an incredible pool of potential teacher talent. The Secretary of Education always tells me that we're going to have to hire 2 million more teachers in the next few years, because of the growth of the student population and the retirement of the existing teacher corps.

So I think we should do more, and this is a big downpayment on it. And I must say, Members of Congress, if you think that we ought to spend even more money on it, I'll support you. [Laughter] I think we should make it easier for people who have kept our Nation strong to provide for a strong American future in the 21st century.

Now let me just mention one other program that is very important to me, and that's the master teacher program. The National Board for Professional Teacher Certification has received almost unanimous support from teachers and other educators throughout our country. We are trying to get 100,000 certified master teachers, enough so that we'll have at least one in every school building in America. And when we do that, we know

they will have a dramatic impact on improving the quality of the existing teacher corps. So I hope we will have support for that.

And if we do these things, in addition to the other proposals, I think that we will be doing our part to ensure that we'll have the kind of schools our children need and our country needs, in the 21st century, because it all starts with a teacher like Mr. Moore.

Thank you very much.

NOTE: The President spoke at 12:30 p.m. in the Presidential Hall (formerly Room 450) of the Old Executive Office Building. In his remarks, he referred to Sgt. Arthur Moore, USA (Ret.), teacher, Harlem Park Community School, who introduced the President.

Excerpt From an Interview With Judith Miller and William Broad of the New York Times

January 21, 1999

Senator Dale Bumpers' Senate Impeachment Trial Presentation

Q. We're about to go. Did you have a chance to watch any of Senator Bumpers' presentation today?

The President. I did. It's the only thing I've watched. I watched that.

Q. He said—he criticized the House managers for lacking compassion for your family. He described your family as a family that has been “about as decimated as a family can get. The relationship between husband and wife, father and child, has been incredibly strained if not destroyed.” Is that an accurate representation?

The President. Well, it's been—I would say it has been a strain for my family. But we have worked very hard, and I think we have come through the worst. We love each other very much, and we've worked on it very hard. But I think he was showing—you know, he knows me and Hillary and Chelsea, and we've all been friends, as he said, for 25 years. I think he was just trying to inject a human element into what he was saying.

NOTE: The interview began at approximately 6:30 p.m. in the Oval Office at the White House on January 21 and was made available by the Office of the Press Secretary on January 22. A tape was

not available for verification of the content of this interview.

Remarks at the National Academy of Science

January 22, 1999

Thank you very much. Jamie, Dr. Lederberg, I'd like to thank you for your service in this and so many other ways. I would like to thank Sandy Berger for many things, including indulging my nagging on this subject for the better part of 6 years now.

I was so relieved that Dr. Lederberg, not very long ago—well, last year—brought a distinguished panel of experts together to discuss this bioterrorism threat, because I then had experts to cite for my concern and nobody thought I was just reading too many novels late at night. *[Laughter]*

Madame Attorney General, Secretary Shalala, Secretary Richardson, Director Witt, Deputy Secretary Hamre, Commandant of the Coast Guard and our other military leaders who are here, Mr. Clarke, ladies and gentlemen. I'm delighted to be here to discuss this subject. With some trepidation, Sandy Berger noted that Dr. Lederberg won a Nobel Prize at 33, and I was Governor; you can infer from that that I was not very good at chemistry and biology. *[Laughter]*

But any democracy is imbued with the responsibility of ordinary citizens who do not have extraordinary expertise to meet the challenges of each new age. And that is what we are all trying to do. Our country has always met the challenges of those who would do us harm. At the heart of our national defense I have always believed is our attempt to live by our values, democracy, freedom, equal opportunity. We are working hard to fulfill these values at home. And we are working with nations around the world to advance them, to build a new era of interdependence where nations work together, not simply for peace and security but also for better schools and health care, broader prosperity, a cleaner environment, and a greater involvement by citizens everywhere in shaping their own future.

In the struggle to defend our people and values and to advance them wherever possible, we confront threats both old and new:
